The Story Behind Our Green Range

As a Company, we have always worked tirelessly to establish ourselves as one of the most Loved & Revered brands for High Quality Workwear at Exceptionally Good Prices; an accolade we are truly passionate about.

The maxim we have always put into practise for achieving this accolade is, to put it plainly; “**Mindfulness**”.

“**Mindfulness**” not just for the wonderful team members we have, but also for our fantastic customers, the success of their business and their overall wellbeing.

With so many drastic changes affecting our climate, our daily existence and the wellbeing of our magical yet increasingly fragile planet, it was critical for us as a company to align our efforts with the exceptional manufacturing facilities we own, to bring about a much needed change.

Workwear has truly transformed over the last few years in leaps and bounds. It has become smarter, sleeker and more functional. Being one of the leading brands in the Workwear Segment, it was a natural progression for us to address the need for **a Range of High Quality Sustainable Workwear Styles which truly DOES NOT COST THE EARTH. Or the Customer.**

And so, the Green Range by Uneek was born!

FAQ's about the Green Range by Uneek.

We hope the FAQ's below cover most of the questions you have.

However, if there's more you need to know or require any form of documentation/certification, simply get in touch with us right away.

Question 1: I have seen a sample of each style in the Green Range. The Quality and fabric feel is absolutely spellbinding for the price! How are you able to offer such high quality sustainable garments for such a great price?

Glad you asked! As a company, we are very fortunate to own one of the finest, state of the art factories in Bangladesh, where our Green Range is manufactured.

We are pleased to share that our factory manufactures clothing not just for our sustainable Green Range & some of our existing styles, we additionally manufacture for a number of World Renowned Retail Clothing Brands, brands that you might be highly familiar with and even unshakably partial towards!

Being a truly State of the Art factory with seamless Vertical Integration, Fantastic Production Facilities and Exceptionally High Global Standards; this gives us a strategic advantage and great overall control throughout the value chain.

Which in turn, gives you an unparalleled advantage in the form of the final product, it's quality, craftsmanship and price.

Our factory is fully certified by The Control Union Certifications BV Netherlands (www.controlunion.com) for Global Recycle Standard (GRS) Version 4 and for Organic Content Standard (OCS) Version 3.

We will be pleased to provide all supporting documentation/certification.

Additionally, our factory is certified for WRAP and Oeko Tex 100 and is regularly audited by Amfori/BSCI for Business Social Compliance and Sedex (SMETA) for Responsible and Ethical business practices in global supply chains.

Please contact us for any documentation/certificates you may require.

FAQ's about the Green Range by Uneek.

Question 2: Sounds great. Can you share a bit more information about your production facility/factory and what environmental & ethical practises are in place for a brighter future for our planet and the team members who work at your factory?

Lets start with Energy and Emissions. As we all know, a vast amount of precious energy & resources are required in the production of Garments. Being a State of the Art Production Facility that produces garments for World Renowned Retail brands; we have to use our resources wisely and tick all boxes related to Optimal Environmental, Social and Ethical processes.

Our factory currently uses the HIGG Worldly Platform (www.worldly.io) to monitor all aspects of Green House Gas (GHG) Emissions related to production.

Additionally, our Factory is enrolled in two separate programs related to the close monitoring and reduction of Green House Gases, Water and other resources:

- a. The Planet Forward Environmental Program (www.planetfwd.com) utilising an RTIS platform for resource tracking information. (www.rtis.cloud)
- b. The Water Saving in Textile and Garment Industries (WaSaTex) Program by the GIZ Project (www.giz.de/en/html/index.html)

Apart from our factory being fully certified by The Control Union Certifications BV Netherlands (www.controlunion.com) for Global Recycle Standard (GRS) Version 4 and for Organic Content Standard (OCS) Version 3, we have the following factory certificates in place:

- WRAP (GOLD)
- Oeko Tex Standard 100
- Global Organic Textile Standard (GOTS)
- STeP by Oeko Tex, for Knitting, Dyeing, Finishing, Embroidery & Making of Knitted Garments
- Audited by Amfori/BSCI for Business Social Compliance
- Audited by Sedex (SMETA) for Responsible and Ethical business practices in global supply chains

All our team members at the factory are well cared for. At the production facility itself, we have an established Fair Price Shop maintained by the factory that sells high quality goods/necessities at very affordable prices, without having to travel elsewhere.

All our team members have access to free medical health check-ups for their overall well being.

FAQ's about the Green Range by Uneek.

Question 3: How Many Recycled Bottles are used in each style in the Green Range?

In general, it is not straightforward to answer this question as the exact number would vary from style to style and is dependent on a number of factors such as the percentage composition of the Recycled Polyester in the final fabric, the garment type, the fabric knit structure (Pique, Fleece, Single Jersey) , the fabric weight & garment size etc.

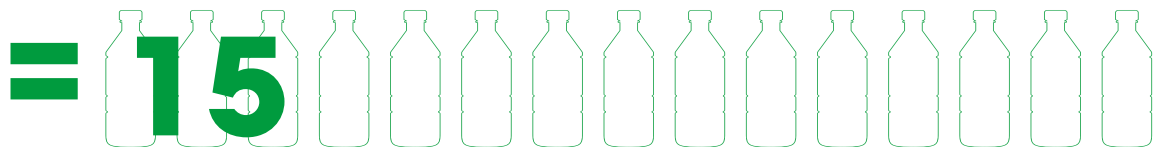

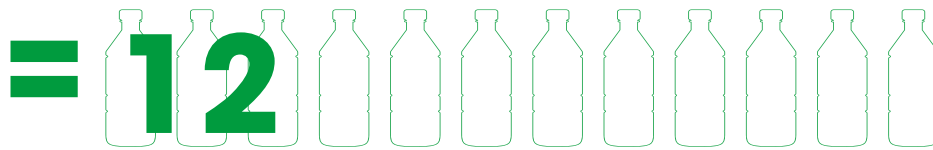

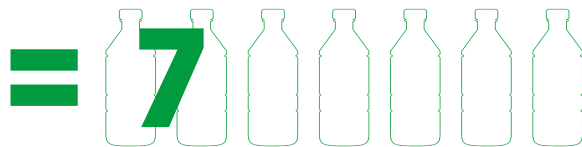

However, a reasonably fair benchmark for each style in our Green Range would be as below:

GR11 Eco Polo Shirt: Around 7 Plastic Bottles

GR21 Eco Sweatshirt: Around 12 Plastic Bottles

GR51 Eco Hoodie: Around 15 Plastic Bottles

GR31 Eco T Shirt: None. The T Shirt is made of 75% Organic Cotton, 25% Recycled Cotton

None.

(No Recycled Polyester Content in T Shirt)

FAQ's about the Green Range by Uneek.

Question 4: What is Recycled Polyester and what are the main benefits?

Recycled polyester, often called rPet, is made from recycled plastic bottles.

There are a number of benefits. It is a great way to divert plastic from our landfills. The production of recycled polyester requires far fewer resources such as Energy and Water, than that of new virgin Polyester fibers and generates fewer CO2 emissions and Waste.

The Recycled Polyester yarn that we use in the Green Range is a DTY Yarn (Drawn Textured Yarn) made from 100% Post Consumer Recycled Plastic Bottles.

In general, there are two types of standards used for Recycled Fibers: GRS Standard (Global Recycled Standard) and RCS. (Recycled Claim Standard).

GRS is a better/higher standard compared to RCS as the certification process for GRS involves additional criteria for social and environmental processing requirements and chemical restrictions. (Here is a link with a bit more information about GRS: <https://textileexchange.org/recycled-claim-global-recycled-standard/>)

Question 5: What is Organic Cotton and what are the main benefits?

Organic cotton is a more sustainable solution compared to standard cotton. It is grown without pesticides from seeds that have not been genetically modified.

Organic farming practices avoid using harmful chemicals while aiming for environmental sustainability and the use of fewer resources. Chemical-free agricultural land stays fertile much longer than land hampered by the constant use of pesticides, so organic cotton farmers generally have a longer cotton commodity lifespan than otherwise.

Question 6: What is Recycled Cotton and what are the main benefits?

Recycled Cotton is generally made from pre-consumer and/or post-consumer cotton waste. Pre-Consumer Waste is essentially any excess material arising from the production of yarn and fabrics. (So for example: Unused/Excess Cotton Fabric in assorted colors and fabric weights, Unused/Excess cotton yarn in assorted colors and thickness).

Post-Consumer Waste comes from discarded textile products. (So for example: Garments which are produced in excess or rejected due to stitching faults). **We use Pre-Consumer Waste for the Recycled Cotton we use in our Green Range.**

Apart from being a more environmentally friendly option, there are several benefits of using Recycled Cotton, including a reduction in wastage, the use of less water and energy in production and lower CO2 emissions.

FAQ's about the Green Range by Uneek.

Question 7: What is the Fabric Composition of the Green Range by Uneek?

The Poloshirt (GR11), the Sweatshirt (GR21) and the Hoodie (GR51) are all made from 50% Recycled Polyester, 30% Recycled Cotton and 20% Organic Cotton.

The T Shirt (GR31) is made from 75% Organic Cotton, 25% Recycled Cotton.

Question 8: What is the Fabric Weight of the Green Range by Uneek?

The Poloshirt (GR11) comes in a 220 GSM fabric weight.

The Sweatshirt (GR21) and the Hoodie (GR51) come in a 300 GSM fabric weight.

The T Shirt (GR31) comes in a 180 GSM fabric weight.

Question 9: Can the Garments be easily Re-Branded?

Yes!

All the Styles in the Green Range come with an easy to remove Tear Away Label at the Neck. They additionally come with a woven Size Label (Located slightly towards the right of the center neck so there is more space in the centre for your brand) and an unbranded Composition and Care Satin Label sewn into the side seam.

Question 10: What Packaging do you use for the Green Range?

None of the Styles are Single Polybagged. They are all flat packed in a carton.

There are 10 pcs per blister/large bag. Each blister/large bag is made of Recycled Plastic.

Thank You.

A man with short brown hair and a light beard is wearing a bright red hoodie. He is standing against a solid green background. A white leaf icon is positioned above the 'e' in the word 'Green'. The word 'Green' is written in a large, white, sans-serif font. Below it, the word 'neek' is written in a smaller, white, sans-serif font.
